Sharepoint 2007 Adding a Keyword to Search

In Sharepoint 2007 to add a Keyword to the search - it is a matter of going into the Central Administrator - click the Shared Services Administration: SSP Administration Site > Search Administration > Managed Properties which brings one to the Metadata Property Mappings (url will look like http://localhost/ssp/admin/_layouts/schema.aspx) Click New Managed Property -> then add the proper items - note you have to click Add Mapping then select Sharepoint then scroll through the list and select the managed property - at the next incremental crawl the keyword will then appear in the search results if searched for:

Use this page to view and change the settings of this property.

Name and type

Type a name for this property, and select the type of information you want to store in this property.

Property name: *

Keyword

Description:

Keyword

The type of information in this property: Text

Content using this property

This section displays the number of items found with this property.

Number of items found with this property: 0

Mappings to crawled properties

A list of crawled properties mapped to this managed property is shown. To use a crawled property in the search system, map it to a managed property. A managed property can get a value from a crawled property based on the order specified using the Move Up and Move Down buttons or from all the crawled properties mapped.

Include values from all crawled properties mapped

Include values from a single crawled property based on the order specified

Crawled properties mapped to this managed property:

ows_Keyword(Text)
